Luka Bukhrashvili

Philadelphia, PA · 484-329-0637 · lukabukhrashvili01@gmail.com

PROFESSIONAL SUMMARY

Electrical Assembler at Agape by UCC Inc building and wiring industrial control panels for UF–RO and EDI water treatment systems, as primary wireman across both Siemens and Allen-Bradley platforms. EPA 608 Universal and OSHA 10 certified, plus five NC3 credentials. Building toward controls engineering through company training, PLC self-study, and an Electrical Engineering Technology degree starting Spring 2027.

EXPERIENCE

Electrical Assembler — Agape by UCC Inc, Harleysville, PA

May 2026 – Present · Contract via Synerfac Technical Staffing; conversion to direct hire expected New Year 2027

- Primary wireman on industrial control panel builds for UF–RO and EDI water treatment systems — personally wired ~75% of the work across these systems, and 80–90% of the EDI system build
- Build multi-enclosure panel sets from full drawing packages — main control panels, VFD panels, and chemical injection panels — from bare enclosure to completed, verified panel; flagship current project: a $2.5M containerized build — a complete UF–RO system spanning three 40-ft containers, with my scope running the full chain from field sensors through raceway to enclosure wiring
- Wire Siemens S7-1200 and S7-1500 PLC systems (TIA Portal platform) and Allen-Bradley CompactLogix 5380 systems with 5069 I/O and FLEX 5000 remote I/O on EtherNet/IP (Stratix switches)
- Wire Bardac VFDs and terminate motors (feed, backwash, and CIP pumps), including line reactors and 460/480V three-phase power distribution with MCCBs and control transformers
- Wire instrumentation end to end: Mettler Toledo Thornton analytical transmitters, ifm pressure transmitters, and flow / conductivity / resistivity analog loops landed on PLC analog inputs
- Wire Numatics solenoid valve manifolds and IonPure EDI DC power controllers (G3)
- Work from electrical schematics, panel layouts, and bills of material; red-check each drawing sheet as circuits are completed
- Selected for company-sponsored training in electrical troubleshooting, startup & commissioning, pipefitting, and forklift certification

Electrical Technician Trainee — TAIA School, Philadelphia, PA

April 2024 – October 2024

- Trained under a licensed electrician on residential and commercial electrical work
- Diagnosed and replaced a burned 3-phase cable; supported a full panel upgrade and breaker installation

CERTIFICATIONS

- EPA 608 Universal · OSHA 10 · NC3 Electricity · NC3 Fluid Power · NC3 Mechanical Systems · NC3 Mechatronics · NC3 Industry 4.0

SKILLS

- **Platforms:** Siemens S7-1200 / S7-1500, TIA Portal · Allen-Bradley CompactLogix 5380, 5069 I/O, FLEX 5000 remote I/O · EtherNet/IP, Stratix switches · Arduino
- **Electrical:** Control panel building and wiring · Electrical schematics · VFDs (Bardac) and motor terminations · 460/480V three-phase power distribution, MCCBs, control transformers, line reactors · Point-to-point testing · Electrical troubleshooting
- **Process:** Water treatment systems (UF–RO, EDI) · Industrial instrumentation · 4–20 mA analog signal wiring · Thornton analytical transmitters, ifm pressure transmitters · Numatics solenoid valve manifolds · IonPure EDI power controllers

PROJECTS

- **Arduino-based control panel (personal build):** Designed and wired my own control panel in a real enclosure — Arduino Uno, Mean Well EDR-120-24 24V power supply, DIN-rail terminals and relay, LCD display, pilot light, and buzzer/LED indicators — built to industrial practice with labeled wiring.

EDUCATION

- **Community College of Philadelphia** — Electro-Mechanical Technology Program, 294 hrs (2025–2026); A.A.S., Electrical Engineering Technology starting Spring 2027
- **TAIA School** — Electrical Training Program (2024)
- **Nanjing Normal University** — Bachelor of Arts (2019–2023)
